PEDIATRIC ROUTINE MEDICAL CARE (PRMC) - ALS
(Age Newborn – 15 yrs.)

1. Scene Safety & Universal Precautions (BSI)

2. Assess level of consciousness (PGCS)

3. Secure and maintain airway

4. Administer oxygen per appropriate method to maintain oxygen saturation ≥ 94%
   - For patients with respiratory distress, shock, smoke inhalation, carbon monoxide poisoning, or cardiac arrest, administer high flow oxygen 15 L by most appropriate method
   - (See Appendix for Oxygen Delivery Methods)

5. Obtain vital signs

6. AED, cardiac monitor, pulse oximetry and capnography as appropriate per protocol

7. Assess for hypoperfusion

8. Prevent heat loss/decreased body temperature

9. Assess pain using pain scale

10. Obtain history

11. See appropriate protocol

12. Initiate patient care per Initiation of Patient Care policy

13. Reference Broselow Tape

14. Transport and contact Medical Control as appropriate

1 – See Pediatric Initial Assessment
