OBSTETRIC PATIENT TRANSPORT

I. All pregnant patients greater than 20 weeks gestation with obstetrical related emergencies such as, but not limited to: abdominal pain, contractions, vaginal bleeding, ruptured membranes, or immediately postpartum are to be transported to a participating hospital designated as an appropriate perinatal facility for obstetrical patients (see attachment 1).

A. High Risk Obstetrical Patients

1. Transport pregnant patients between 20-30 weeks gestation with an obstetrical related complaint to the closest Level III perinatal hospital unless the patient is deemed unstable for additional transport time. If the patient is deemed unstable the patient should be transported to the closest perinatal facility.

   A patient is considered “unstable” if they exhibit any of the following:
   • Display crowning or a presenting part at the perineum
   • Have brisk vaginal bleeding
   • Have abnormal vital signs
   • Exhibit altered mental status.

   If there is any question about the “stability” of a pregnant patient, Online Medical Control should be contacted to assist with destination decisions.

2. Pregnant woman with an obstetrical related complaint stating she has been deemed a “high risk” obstetrical patient that requires care or delivery at one of the Region’s Level III perinatal hospitals should be transported to the closest Level III hospital unless she is unstable as defined above.

II. In rare and unusual circumstances, at the EMS personnel’s discretion, in consultation with OLMC, the patient may be transported to the closest appropriate facility for stabilization.

Attachment 1: List of Participating Hospitals Designated as Appropriate Perinatal Hospitals for Obstetrical Patients
PARTICIPATING HOSPITALS DESIGNATED AS APPROPRIATE PERINATAL HOSPITALS FOR OBSTETRICAL PATIENTS

LEVEL II PERINATAL HOSPITALS
